St. Augustine's Manifesto on the Climate Agenda

Currently, the news is all about the warming of the earth through the greenhouse effect of carbon dioxide emission in the air. We are experiencing droughts, unpredictable weather and seasons. We at St Augustine Educational Community have declared to take lead and act now!

In the compound of the St Augustine Educational Institutions at Bunga Hill, Ggaba Road in Kampala, we are going full swing *Climate Agenda* in our incredibly beautiful "English landscape Park" compound consisting of an International University, an International School with a Cambridge Curriculum, a National School (Montesorri) and a High School.

Gradually, we are changing the compound into a demonstration site for the **Climate Agenda** and **renewable energy**; pupils, students, teachers and parents are fully involved in creating illustrations that can be rolled-out to the communities. Climate and renewable energy will be fully integrated in the St. Augustine's Educational Programmes using an approach that ensures full understanding, practical execution, maintenance and sustainability. We are encouraging innovation and entrepreneurship by combining creative Art, Nature & Technological (ANT) approaches such as:

- ✓ *Integrating ANT within the curriculum by introducing exciting extracurricular clubs.*
- ✓ *Encouraging explorative project based learning in collaboration with University students.*
- ✓ *Training students and pupils on documentation including up-loading videos on social media.*
- ✓ *Networking globally with like-minded partners.*
- ✓ *Community outreach and skills sharing with the less privileged.*

THE BURNING ISSUE! The St. Augustine's Community, has stopped burning garbage and started **Waste Management**. We separate waste and recycle it as a resource for composting, we then communally use the manure to grow nutritious food. We use waste to make playing materials, arts and crafts during our creative Fridays' events. We shall set up greenhouses and plantation beds on the school compound; a weather station; and an organic food forest in cooperation with a renowned international organic/biodynamic farm.

We are launching the ENTREPRENEUR STUDENT line, where we equip the young with skills to be leaders in their own area of interest. We reach out to you as partners for any kind of cooperation.
